

# Raiffeisen-Dollár-RövidLejáratúKötvény Alap (R)

## Current fund strategy

Raiffeisen-Dollár-RövidLejáratúKötvény Alap (R) is a bond fund. It primarily invests in bonds in dollar-denominated currencies (USD, CAD, NZD and AUD) with a maximum (remaining) maturity of five years. Issuers of the bonds or money market instruments can include companies, sovereigns and multinational institutions. The fund management works to optimise the risk-return profile using additional active strategies. The Fund is particularly suitable for investors who want a short-term, diversified bond investment in dollar currencies and are aware of the related higher risks, ranging from unfavourable currency developments and price volatility to possible loss of capital in the event of strong increases in yields on the bond markets.

The fund is actively managed with reference to a benchmark. Such reference to a benchmark does not restrict the fund management's scope of action.

Accounting year	01.11. - 31.10.
Bloomberg-Ticker	RAIDOLL

## Recommended holding period in years

## Comments from fund management

Prices of short-dated US government bonds hardly moved in September. The main issues were the COVID crisis with a global resurgence in cases, the US presidential campaigns entering the home stretch, and the adaptation of the US Fed's inflation target to an average of 2% over the cycle.

In terms of interest rates, the fund's positioning is defensive. The share of corporate bonds is approximately 13%.

The ability of the economy and policymakers to deal with high infection rates will be decisive for the strength and resilience of the recovery. Another relevant factor will continue to be the will and capacity of central banks and governments to support companies and the labour market. Congress has recently failed to deliver on this front. The bond market continues to enjoy good support. (23.09.2020)

<sup>1</sup> Raiffeisen KAG calculates performance based on the published fund price, using the OeKB methodology. Individual costs – such as the issue premium, the return fee, the investor's securities account fees, and taxes – are not taken into account in calculating performance. These would reduce the performance if they were included. Past value is not a reliable indicator of the fund's future performance. Regarding our clients whose home currency differs from the fund currency, we would like to point out that the yield may rise or fall also due to currency fluctuations.

<sup>2</sup> The „ongoing charges“ have been calculated on the basis of the figures as of 30.06.2020 including the previous 12-month period. The „ongoing charges“ include the management fee and all fees charged in this period. Third-party transaction costs and performance-related fees are not included in the „ongoing charges“. The „ongoing charges“ may differ from year to year. Please refer to the „Expenses“ sub-item of the current annual fund report for precise details of the cost components included in the „ongoing charges“.

<sup>3</sup> For securities with an early call right, this is taken into account when calculating bond indicators. If issuers do not exercise the early call option, this results in a corresponding extension of the maturity structure and thus changes the above-mentioned indicators. Bonds without a specific maturity (perpetuals) are presented with a fictitious maturity of 40 years.
